

# Fixture-as-a-Service

Our unique fixture generation process is available as a service - “Fixture-as-a-Service” (FaaS®) - for quick and cost-effective weld/check fixtures.

Our consultants will join you via a web meeting to learn about your fixture needs and processes in order to propose a partial or full fixture to suit your production or prototyping needs.

After receiving your models, we will send you solid models of your fixture and 2D DXF files for cutting on your own or your sub-contractor’s laser or waterjet.

Our process accepts solid models from a range of popular CAD systems and formats including IGES, Solidworks, SolidEdge, Inventor, CATIA, Pro Engineer, STEP and Unigraphics/NX.

Traditional hard-tooling fixturing can often be a bottleneck. Camtek’s “blade approach” saves significant cost and reduces lead times.

**Call us today for your own web consultation.**
